Neuroscience graduate (BSc Glasgow, MSc King's College London) working toward a PhD in cognitive neuroscience, with research and coursework centred on reward processing, decision-making, and the neural mechanisms of reinforcement learning. Affiliate researcher status at the University of Glasgow. Combines quantitative training on large clinical/population datasets with hands-on patient-facing research experience.

RESEARCH INTERESTS

Neural and computational mechanisms of reward processing, inhibitory control, and decision-making, in healthy and clinical populations. Particularly interested in how prediction-error and reinforcement-learning signals shape choice behaviour, and how these mechanisms are altered in psychiatric and neurological conditions. Motivated by integrative approaches that combine EEG/neuroimaging, computational modelling, and clinical outcome measures (e.g. CBT) to move from describing a mechanism to testing whether it can be changed.

EDUCATION

MSc Psychology and Neuroscience of Mental Health (Merit) – King's College London, UK*2021 – 2023*

BSc (Hons) Neuroscience (2:1) – University of Glasgow, UK*2018 – 2021*
Advanced entry; Class Representative, 2020–2021.

RESEARCH EXPERIENCE

Master's Dissertation — Reward, Risk, and Fairness Processing – King's College London*2022 – 2023*

"The Connection Between Processing Fairness and Reward-Risk Prediction in the Human Brain"

- Narrative synthesis screening over 350 papers and synthesising 10 in depth, across fMRI, EEG, PET, TMS, and tDCS.
- Concluded that reinforcement-learning prediction-error mechanisms underpin social decision-making, linking reward computation to processes usually studied separately in the fairness literature.
- Supervisor: Dr Gisele Dias.

Independent Research Project — EEG Analysis (OpenMIIR)*2026 (ongoing)*

- Self-directed EEG pipeline on the OpenMIIR music-imagery dataset, using IDyOM to model melodic expectation (information content / surprise) and relate it to the neural response.
- Reproducible, version-controlled codebase; independent development of computational and programming skills alongside formal coursework.

Research Intern (incoming) – University of Glasgow*Aug 2026*

- Affiliate researcher status via Dr Ourania Varsou; contributing to a manuscript on generative AI in anatomical education.
- Planned shadowing at the university's Imaging Centre.

Undergraduate Dissertation — Diet and Depression Risk – University of Glasgow*2020 – 2021*

"The Association Between Mediterranean Diet and Depression Risk"

- Analysed UK Biobank data (N = 502,506) using binary logistic regression in R.
- Engineered a novel dietary-adherence variable in the absence of a ready-made measure, and controlled for multiple confounders; found a modest protective association (OR ≈ 0.91).
- Supervisor: Dr Donald Lyall.

PROFESSIONAL EXPERIENCE

Fieldwork Specialist – IQVIA, Athens*2024 – Mar 2026*

- Coordinated end-to-end patient recruitment for non-interventional clinical research across roughly 20 therapeutic areas, from common chronic conditions to rare diseases, managing initial contact, screening, consent, documentation, diagnosis verification, and scheduling.
- Worked directly with sensitive health data and real-world clinical populations, gaining a practical understanding of the operational demands of recruiting and retaining participants for human-subjects research at scale.
- Liaised with project managers and patient organisations; recognised internally as "Excel and AI Champion" for process improvements that strengthened operational continuity.

CONFERENCES

- NeuroMonster Conference, Rome — June 2026.

SKILLS

Programming & analysis: R (statistical modelling, regression); Python (in progress — Stanford Statistical Learning course).

Research methods: Neuroimaging literature synthesis (fMRI, EEG, PET, TMS, tDCS); large-scale dataset management (UK Biobank); EEG signal processing basics (OpenMIIR/IDyOM).

Other: Human-subjects recruitment and data handling; process documentation and handover; independent web development (see Projects).

Languages: Greek (native); English (fluent); French (basic, actively studying).

ADDITIONAL TRAINING (ONGOING)

- Computational Neuroscience: Neuronal Dynamics — EPFL (edX).
- Medical Neuroscience — Duke University (Coursera).
- Statistical Learning (R) — Stanford University.
- Data Visualization — Duke University (Coursera).

PROJECTS

- VibeDeck: a Spotify playlist/DJ web app, independently built and deployed to Cloudflare Workers.
- Multidisciplinary artist across music and visual arts (multiple mediums).
